Yoseph Kedir

yosephkse@gmail.com | +251940471384 | yosephk.com | linkedin.com/in/yoseph-kedir | github.com/YosephSE

Skills

Languages: TypeScript, JavaScript, Python, SQL, C++, Bash

Frontend: React, Next.js, Vue, Nuxt.js, Tailwind CSS, React Native

Backend: Node.js, Express, FastAPI, Flask

Databases: PostgreSQL, MongoDB, MySQL, Redis

Tools: Docker, GitHub Actions, Firebase, Git

Experience

CTO — GiveThanks, Greater London, England, UK (Remote) *Apr 2026 – Present*

- Led a 3-engineer team through the end-to-end development and launch of GiveThanks, owning system architecture, feature planning, code quality, testing, and deployment across Android, iOS, and backend systems.
- Shipped 6+ production releases of a mobile community platform piloted by 1,000+ users.
- Architected TypeScript and Express APIs using PostgreSQL, Supabase, and Drizzle ORM, unifying profiles, content, activity tracking, notifications, and analytics within a single backend.
- Engineered a resilient real-time voice-practice system using Deepgram WebSockets and native audio modules, resolving intermittent streaming failures through connection sequencing, token recovery, keep-alives, session telemetry, and deterministic cleanup.
- Designed and delivered a low-latency video-calling feature for real-time audio and video communication within the mobile application.
- **Technologies:** TypeScript, React Native, Expo, Node.js, Express, PostgreSQL, Supabase, Drizzle ORM, Socket.IO, Deepgram, Kotlin.

Founding Engineer — Alactive, Rome, Italy (Remote) *Mar 2025 – Feb 2026*

- Led the development of an agentic system with multiple agents fine-tuned for specific tasks.
- Integrated the system with WhatsApp, email clients (Outlook & Gmail), web clients, and multiple PMS systems via APIs and reverse engineering.
- Optimized response time by 26% by creating a router to dispatch queries to different models based on complexity.
- Built internal tools to monitor, analyze, and maintain the agentic system.
- **Tech Stack:** TypeScript, JavaScript, React, Next.js, Tailwind CSS, Supabase, Azure, LangChain, LangGraph, OpenAI, Redis, PostgreSQL, Docker, WhatsApp API, Gmail API, Outlook API

Full-Stack Developer (Internship) — GO PLATFORM, Doha, Qatar (Remote) *Nov 2024 – Feb 2025*

- Researched and analyzed competitor platforms to understand product capabilities and derive effective system design strategies.
- Reverse-engineered closed-source proprietary software to map underlying system architecture and workflows.
- Developed core application features using Vue for the frontend and Express for backend services.
- **Tools & Methods:** Figma, competitor analysis, reverse engineering, system architecture mapping, workflow analysis, Vue.js, Nuxt.js, Express.js

Back-End Engineer — Datafinity, Addis Ababa, Ethiopia (On-site) *May 2023 – Dec 2023*

- Designed, implemented, and maintained a scalable database architecture using Supabase to support growing application demands.
- Reduced database query latency by 2.1× through strategic indexing and a high-performance caching layer.
- Implemented secure backend integrations using encrypted data flows (TLS), hardened API endpoints, and strict access-control policies.
- **Tech Stack:** React, Next.js, Flask, Node.js, Express.js, PostgreSQL, MongoDB

Full-Stack Developer (Internship) — Brighter Generation, Virginia, US (Remote) *Dec 2022 – Mar 2023*

- Led a team of 4 to develop a chronic patient monitoring system automating patient management and real-time monitoring.
- Deployed the system across multiple hospitals, reducing average patient waiting time by 40 minutes and increasing daily hospital capacity by 26%.
- Collaborated with hardware engineers to integrate IoT components and deliver end-to-end patient monitoring solutions.
- **Tech Stack:** React, Flask, Tailwind CSS

Education

Addis Ababa Science and Technology University *Sep 2023 – Jul 2025*
Coursework toward a B.Sc. in Software Engineering

- **Relevant Coursework:** Data Structures & Algorithms, Web Application Development, Software Requirements & Systems Design, AI & Machine Learning, Computer & Network Security

Projects

ethiotrade.org — USD/ETB Exchange-Rate Platform Website

- Built a bilingual financial-data platform aggregating current USD/ETB rates from Ethiopian banks, forex bureaus, and parallel-market sources.
- Developed currency conversion, institution search and sorting, buy/sell guidance, historical charts, rate comparisons, and CSV market-data exports.
- Engineered scheduled collection and historical ingestion pipelines using browser automation, API integrations, web scraping, validation, and missing-observation handling.
- **Tech Stack:** Next.js, React, TypeScript, Tailwind CSS, Recharts, Node.js, Express, Playwright, Cheerio, PostgreSQL, Neon, Drizzle ORM

Roommate.et — Roommate and Shared-Housing Marketplace Website

- Built a responsive web and mobile marketplace for discovering roommates and shared housing across Addis Ababa.
- Developed authenticated profiles, moderated photo listings, and advanced search filters for location, budget, availability, room type, and lifestyle preferences.
- Implemented saved listings and searches, browsing history, connection requests, in-app messaging, notifications, and cross-platform listing management.
- **Tech Stack:** Next.js, React, TypeScript, Tailwind CSS, React Query, Expo, React Native, PostgreSQL, Neon, Prisma, Better Auth, Vercel Blob

Tabs Website | GitHub

- Built a cross-browser side-panel extension for Chrome and Firefox that captures the current tab or an entire window while automatically preventing duplicate links.
- Developed link groups, search and filtering, metadata previews, quick actions, and CSV/JSON import-export for organizing and transferring saved content.
- Implemented keyboard shortcuts, customizable themes and fonts, browser-local persistence, and platform-specific build pipelines; published on the Chrome Web Store and Firefox Add-ons.
- **Tech Stack:** React, TypeScript, Vite, Chrome Extension APIs, Firefox WebExtensions APIs, CSS, Node.js

Application Tracking System Website | GitHub

- Built a full-stack recruitment platform with role-based candidate, administrator, and super-administrator workflows secured through JWT authentication and HTTP-only cookies.
- Developed job publishing and filtering, candidate profiles and resume generation, application tracking, administrator approvals, and recruitment analytics dashboards.
- Integrated Gemini-powered application scoring, Firebase file storage, status-based application review, and automated email notifications.
- **Tech Stack:** Next.js, React, TypeScript, Tailwind CSS, Material UI, Redux Toolkit, MongoDB, Mongoose, Firebase Storage, Google Gemini, Nodemailer
